

## *MasterTax ip the e-Evolution of Payroll Tax Services*

Phoenix, AZ – March 24<sup>th</sup>, 2002 – today at the first annual MasterTax Users Conference in Phoenix, Arizona, MasterTax announced July 1, 2002 as the launch date for their browser-based payroll tax filing and compliance solution. The portal is designed to enhance MasterTax's existing services by providing Payroll Service Providers and other middle-market clients with the ability to automate the functions of the payroll tax filing process via the World Wide Web.

The emergence of PEOs has reduced payroll-processing issues; however, it has not addressed one of the biggest issues facing today's payroll tax manager – tax information overload. MasterTax ip addresses this issue by maintaining and updating the over 10,000 tax and compliance rules and incorporating them into its automated applications.

“MasterTax ip is the best example of the E-evolution of payroll and tax service solutions,” said Bill Harris, Director of Product Development of MasterTax. “In 1996 we recognized the need for a successful tax filing software solution so we introduced MasterTax, a suite of products that effectively performs the requirements of payroll tax payment and reporting. The next logical step for MasterTax was to leverage these powerful business tools from a single point with no technical implications to our clients' existing technical infrastructure. This is why we created MasterTax ip.”

A demonstration of MasterTax ip will soon be available. Please contact MasterTax's Public Relations department at (480) 778-8707 for more information.
